

# Bleeping Computer: Windows Kerberos Bronze Bit attack gets public exploit, patch now

written by Jake Karnes | December 10, 2020

On December 10, NetSPI Security Consultant Jake Karnes was featured in Bleeping Computer:

*Proof-of-concept exploit code and full details on a Windows Kerberos security bypass vulnerability have been published earlier this week by Jake Karnes, the NetSPI security consultant and penetration tester who reported the security bug to Microsoft.*

*The security bug tracked as CVE-2020-17049 and patched by Microsoft during November 2020's Patch Tuesday can be exploited in what the researcher has named as Kerberos Bronze Bit attacks.*
