

Penetration Testing as a Service

POWERED BY
RESOLVE

Your organization is always-on and your security should be too. NetSPI Penetration Testing as a Service (PTaaS) makes our expert penetration testing team available for you when you need it. Whether it's scoping a new engagement, parsing real-time vulnerability reports, assisting you with remediation, or keeping you compliant year-round, PTaaS has you covered. Learn how NetSPI uses our full service portfolio to deliver world-class, continuous security testing for you.

Advise

Understand the effectiveness of your security program through NetSPI's executive advisory services.

Assess

Assess internal and external infrastructure using NetSPI's first class application, network, and cloud penetration testing services.

Scale

Scale NetSPI's offerings and penetration testers across your entire security program.

Continue

Use NetSPI to gain continuous monitoring and insight into your organization's application and network security.

Enhanced Reporting: Live, consumable testing results are delivered via Resolve, our vulnerability management platform, giving you a single-pane view of vulnerabilities and allows you to drill down into the data to see trend analysis year over year.

Reduced Administrative Time: Spend more time delivering value to the business, and less time managing projects. From scoping to remediation, PTaaS removes administrative hassles and makes sure your pen tests start and end on time.

Accelerated Remediation: Live, interactive reporting makes the path to remediation clear and easy. Integrate with your ticketing systems and remediation tools to streamline the remediation process.

Scan Monster: Find vulnerabilities faster with NetSPI's proprietary continuous scanning technology. Integrated with Resolve, vulnerabilities are automatically deduplicated and are verified by NetSPI's pen testing team, bringing clarity to your results.

Advise

Advisory Services

To fully recognize the value of your technical testing efforts and help ensure the greatest security posture for your organization, multiple Threat and Vulnerability Management (TVM) program elements need to work together harmoniously. NetSPI has developed a comprehensive framework that helps our clients thoughtfully consider the necessary elements of a TVM program.

Assess

Application Penetration Testing

NetSPI's team of application security testing experts specialize in identifying and exploiting vulnerabilities in **Web**, **Mobile**, and **Thick Applications**. Whether your application is hosted internally, or in the cloud, NetSPI evaluates applications for security vulnerabilities and provides recommendations to your company with clear, actionable remediation instructions to improve your overall security posture.

Network Penetration Testing

Attack surfaces have significantly increased with the explosion of cloud and IoT. NetSPI's penetration testing supports you in identifying unauthorized access to your protected systems. Through a combination of **External**, **Internal**, and **Wireless Network** penetration testing, NetSPI can test your entire infrastructure.

Cloud Penetration Testing

Our cloud penetration testing services will identify security gaps in your cloud infrastructure and provide you with actionable guidance for remediating vulnerabilities and improving your organization's cloud security posture.

Adversarial Simulation

Companies continue to invest in security solutions, training, and managed service providers without fully testing their effectiveness. Let NetSPI help you assess those investments, and better understand where to spend time and money based on a true evaluation of your baseline detection and response capabilities. Our adversarial simulation services can be customized to meet your needs and help you find the answers you're looking for through **Detective Control Reviews**, **Red Team Operations**, & **Social Engineering Engagements**.

Continue

Continuous Penetration Testing

NetSPI's Continuous Penetration Testing enhances your recurring deep-dive manual penetration tests with high-quality, low-cost touch points throughout the year. **Scan Monster** allows your networks and applications to be scanned at any rate you decide, with all asset and vulnerability information flowing directly into Resolve. All critical vulnerabilities are immediately escalated to NetSPI's penetration testing team and verified within 48 hours.

Scale

Penetration Testing as a Service is a new era of pen testing, allowing you to continuously test your environment, test additional networks and applications, and increase your speed to remediation via interactive, consumable results in Resolve.

About NetSPI Resolve

Resolve correlates all vulnerability data across your organization into a single view, so you can find, prioritize, and fix vulnerabilities faster.

About NetSPI

NetSPI is the leading cybersecurity company and solution provider. Proud partner with 7 of the top 10 U.S. banks and the largest global cloud providers, we empower organizations to scale and operationalize their security programs, globally.
